

# LONGWALL RELOCATIONS

Ampcontrol's specialist technical support teams can help you ensure an efficient, safe and compliant longwall relocation.

As equipment OEMs we know the logistical and resource heavy requirements associated with longwall moves. Our longwall relocation specialists work alongside your onsite staff to manage the electrical requirements and ensure your electrical components are put back in service in an efficient and compliant manner.

From complete relocation management packages to onsite support Ampcontrol provides a longwall relocation package customised to your needs.

Our services provide:

- OEM support for Ampcontrol electronic relays and systems (IPD, OCS, iMAC VoiceCom, Gasguard)
- A single point of contact for the site, enabling open and direct communication
- Pre longwall relocation audits and inspections to assist with formulating scopes of work and planning
- Offsite coordination and management of equipment being modified, overhauled or repaired
- Document management - introduction to site, installation checks, pre-power and commissioning
- Equipment 'introduction to site' and return to service management
- Complete or part equipment installation assistance
- Commissioning and initial start up support
- Statutory testing of equipment
- Protection audits and relay testing
- Automation support and assistance
